

Linear Optics Inc.

Replacement DROs

- **QC100** – The QC-100 is a flexible, compact precision digital readout for measuring systems with 1 to 4 axes. It is ideal for measuring angular or linear dimensions and can be used with inspection tools such as optical comparators, measuring microscopes, video systems and coordinate measuring machines.

- **QC200** – The QC-200 is an advanced digital readout with an intuitive user interface, user-defined programs and patented Measure Magic® technology. It is ideal for measuring 2-D features and can be used with inspection tools such as optical comparators, optical edge detection, measuring microscopes, video systems and coordinate measuring machines.

- **QC300E** - The QC-300 features an enhanced color touch-screen interface and patented Measure Magic® technology. It is ideal for the measurement of 2D features and can be used with inspection tools such as measuring microscopes, optical comparators and video systems. All QC-300 Series models include serial and USB ports for use with printers and networks.

METRONICS®

Available on all NEW and Aftermarket products, Metronics digital readout systems lead the precision inspection industry with innovations that improve operator productivity, reduce errors, and save time and money.

Metronics, Inc. digital readout systems offer full geometric measuring capabilities that Linear Optics Inc. & Certified Comparator products can use to update your existing measuring machine with modern capabilities.

INSPECTION SECURITY

Metronics, a leader in reliable, accurate measurements for your system...

PROTECTION YOU CAN TRUST TO BE RELIABLE...

A Leader in reliability of DROs, for now and the future. Metronics.
